ENGAGEMENT

Client		Scope	in-scope networks
Industry	Healthcare provider directory	Comparison basis	Like-for-like, in-scope

HEADLINE FINDING

+79,000 records missing

The vendor's most recent monthly delivery was short by 79,000 in-scope providers (+6.5%) versus an independent re-run of the same source, like-for-like.

COVERAGE COMPARISON

Records in vendor's last delivery	1,212,000
Records in our independent run	1,291,000
In-scope records missing	+79,000 · +6.5%
Out-of-scope records excluded from comparison	
Likely cause	traversal depth

VERIFICATION TRAIL

Dropped-record check (every prior-cycle record reconciled)	Pass · full reconcile
Sampling method	LLM-assisted, targeted
Records re-checked at source	
Row-level appendix	Included · rows

Every figure in this report is traceable to the row-level appendix, so the comparison can be re-run and verified independently against the client's own delivery.

HOW THE AUDIT WAS RUN

The same URL list and instructions, scraped from scratch on our own infrastructure. We never rely on the vendor's pipeline or output.

STEP 02 · DIFF

Head-to-head comparison

Record by record and field by field against the vendor's last delivery: records present in one and absent in the other, fields populated vs empty, values that disagree.

STEP 03 · QA

Dual-layer quality check

A dropped-record check accounts for every record that should exist at source, plus LLM-assisted sampling concentrated on the records most likely to be wrong.

STEP 04 · FAIR TEST

Like-for-like discipline

In-scope compared against in-scope only. Out-of-scope records the vendor returned are excluded, not counted in our favor. De-duplicated, scope-matched, same time window.

WHAT THIS MEANS

At the time of audit, roughly **6.5% of in-scope providers** were absent from the vendor's monthly delivery, with no signal in the delivery itself that anything was missing. The gap pattern recurred across [REDACTED] comparable state directories. Recommended next step: [REDACTED].

REDACTED SAMPLE. Figures are drawn from a real engagement; client identity, source URLs, exact counts, and method detail have been removed. This document is illustrative of the Gap Audit deliverable, not a live client report.
